

Microsoft 365 Security

for Mid-Size Business

Enabling a Secured & Connected Modern Workplace with Microsoft 365

Security in today's cloud-first era is paramount for businesses of all sizes. However, the challenge remains for mid-size businesses to strike the right balance between keeping employees connected, productive and protecting the business against emerging sophisticated cyber threats.

Microsoft 365 Security for Mid-Size Business is a pragmatic approach combining consultation, technical implementation and fully managed services* of the Security and Information Protection features of Microsoft 365, in a sequence of steps that ensures a secured and productive environment for mid-size businesses.

- ✓ Microsoft 365 Account & Subscription Administration
- ✓ Ongoing End-User Security Awareness & Adoption Training

Microsoft 365 Security Scope

Microsoft 365 Security scope for Mid-Size Businesses includes deployment of following Microsoft 365 Threat Protection & Information Protection features:

For Mid-Size Business

Threat Protection:

Mobile Device Management (MDM) for enrollment of corporate-owned devices (such as mobiles, PCs & laptops), managing the organisation's security policies and business applications

Mobile Application Management (MAM) for restricting copying or saving of company data to unauthorised apps & locations, for e.g. employees cannot save organisation data on personal devices such as home PC or mobiles

Enable Self-Service Password Reset (SSPR) – employees can reset their password on their own anytime, without requiring IT support

Enable Multi-Factor Authentication (MFA) – put in place an additional login security layer which makes it exponentially more difficult for hackers to get access to employees' accounts

Conditional Access – maintains control over how organisation data is being accessed by employees based on permitted application or their geographical location – for e.g. block specific employees who are accessing organisation data from outside home country

Microsoft Defender for Office 365 – safeguards your organisation against malicious threats such as phishing attempts and ransomware, posed by email messages, links (URLs)

Safeguards the organisation's endpoints across multiple platforms against ransomware and other emerging cyber threats with real-time antivirus and antimalware protection

Sentinel Security Monitoring & Auditing Dashboard – real-time dashboard offering proactive security monitoring & reporting of the organisation's Microsoft 365 environment to detect potential sophisticated cyber threats and comply with audit requirements

Information Protection:

Classify, identify & tag email and documents with sensitivity labels (such as General, Internal Only or Sensitive, etc.) to apply data protection policies (for e.g. do-not-print, do-not-forward, for internal sharing only, etc.)

Data Loss Prevention on emails – protects organisation sensitive data from intentional or unintentional leakage, blocking undesired actions and access by untrusted and/or malicious actors

Email long-term retention – enable long-term data retention policies to ensure organisation never lose an outgoing or incoming email due to intentional or unintentional delete by anyone and allows organisation-wide search of email using criteria such as keywords or recipient email id, etc.
